Wall cladding

Doors

Inside / Outside

Slabs so innovative and versatile that they break down the barriers between surfaces for architecture and furnishing, between indoor and outdoor use. The freedom to design grows, with solutions that were impossible until yesterday.

Marble inspiration

MAXFINE offers a very rich variety of textural effects so as to always find the right uncompromising inspiration.

Each material is a prototype of beauty: marble, onyx, metal, stone, wood, and concrete.

Stone inspiration

Large-size slabs and modular formats for any flooring or wall, but also for dressing a design.
 With **MAXFINE** everything can be made: from the walls of a skyscraper to a garden table.

/ Limitations & Responsibilities

We have taken every care to provide complete information in this document; this information should be used as a guide in the design, installation and care of MAXFINE IRIS FMG large porcelain panels. No warranty however implied or expressed, is given in relation to the procedures outlined in this technical information guide except that is required by industry standards.

MAXFINE IRIS FMG / IRIS U.S. assumes that the designers, fabricators and installers using our large porcelain panels are familiar with all aspects outlined in the information provided, and strictly adhere to the recommendations and specifications described herein and by ANSI industry standards. Any deviation from the recommended guidelines may result in the products not performing as expected, and may result in the warranty becoming null and void. Though every care and precaution has been taken in the preparation of this document, MAXFINE IRIS FMG / IRIS U.S. assumes no responsibility for errors and/or omissions, or for the damages resulting from the use of instruction contained in the information hereby provided.

MAXFINE IRIS FMG / IRIS U.S. shall not be liable for any loss of profit or any other loss or damage caused or alleged to have been caused either directly or indirectly as a result of any person solely relying upon any information contained in this manual.

MAXFINE IRIS FMG / IRIS U.S. reserves the right to change or modify this manual or its electronic version from time to time without notice. It is the responsibility of the consumer to consult or contact MAXFINE IRIS FMG / IRIS U.S. for the latest version or updates.

PRODUCT IDENTIFICATION

- Each full crate will include a product sticker with the product description, shade, size, and code, along with a packing slip for details of shipment and material.
- All smaller shipments will only include the packing slip. If a special shade is needed, please indicate it on the purchase order. When ordering the same material multiple times, the same (original) shade cannot be guaranteed.

ISO 13008 En610 EN 14411 - B1a UGL Polished materials are treated after firing					

FOR ALL PANELS FROM 120" X 60" & 60" X 60", VERTICAL TRANSPORTATION IS PREFERRED BY USING A-FRAME PACKAGING:

- A-frame packaging can hold up to 50 pieces of 5'x10' porcelain panels vertically.
- Full 20 ft. containers hold 150 pieces (3 total A-frames).

OTHER SIZE PACKAGING:

- 15"x30", 30"x30", and 30"x60" are regularly packaged in a box and shipped in wood crates. 60"x60" are shipped flat in reinforced crates, holding 24 pieces per crate, or on a vertical A-frame holding up to 48 pieces.

WHEN TAKING DELIVERY OF LARGE PORCELAIN PANELS 120" X 60" & 60" X 60" PLEASE NOTE THE FOLLOWING:

- It is important to examine any shipment to notate any damage on BOL or a claim may be refused.
- If you detect any defect after taking delivery of the panels, and prior to cutting, do not proceed with the processing. Call your customer service or sales representative immediately.

We do not recommend using the same A-frame to ship with as that received from the factory.

- When uncrating the panels, always apply clamps on an A-frame before strapping band is cut from the crate.

- Use a forklift boom & pitch clamp to carefully move the panels from the original slim factory A-frame, to an A-frame with a wider base and more obtuse angle. We recommend padding the A-frame prior to placing the panels on to each of its sides.

- Use 3 straps to tie the panels to the A-frame, and wrap plastic around the entire A-frame 3X to prepare the package for shipment.

- For the correct handling of the pallets, a fork lift truck must be used, at least 8 ft. long, with the forks positioned in the largest width position.
- Under normal conditions, the forks are positioned in the middle of the long side of the pallet, as they must grip the whole depth of the pallet.
- To allow the loading or extraction of the slabs easily and safely, it is recommended to position the pallets in a suitable area where the lift truck can be moved around all sides of the pallet.

- On all LTL shipments (12 panels or less), always strap A-frames securely inside of a cab. Never clamp them.

- Pump Activated Suction cup handles are recommended to move a panel a short distance. Panel weight is approx. 140 lbs. and no more than 2 experienced people are suggested to move.

- To safely transport up to 8 slabs of 6mm from warehouse to job site we strongly recommend the use of a transporter. The transporter is also designed to store slabs on the job site.

See page 63 for recommended tool providers

- Make sure to use proper base support when standing a panel. The use of two support pieces about 2" thick and 24" from each end of the panel, or a solid base with protective cushioning is recommended.

PLEASE USE PROPER HANDLING TOOLS WHEN MOVING THE PANELS OR CRATES

- Forklift Extension *See page 54*
- Suction Cups *See page 55*
- Large Porcelain Panel Tile Transporter *See page 55*
- Forklift Boom & Pinch Clamp *See page 54*

See page 63-65 for recommended tool providers

OTHER HANDLING TOOLS NEEDED

- Rigid Working Table to Match the Dimension of the Panels 120" x 60" or larger *See photo above.*
- Scoring Tools *See page 57-59*
- Variable Speed Grinder With Electroplated Diamond Blades *See page 57*

| • Rubber mallet | • Paper towels |

- The “score and snap” is the preferred method for straight cuts (from one end of the panel to the other) using a recommended tool.

See page 63-65 for recommended tool providers

- When planning a cut that will be the full length of the panel, either with a plunge cut, or starting at the edge, mark and drill a relief hole at the termination point of the cut, then cut towards the relief hole. Properly support piece equally across entire surface of the piece when setting in mortar and prior to handling for installation.
- When planning a plunge cut, drill a relief hole with a electroplated core bit at the termination point of the cut, prior to beginning the cut. Always cut towards the relief hole.
- When planning a “U” shaped cut, mark, and drill relief holes where the cut lines will intersect. Always make the shortest cuts first, leaving your waste/dropout attached to the largest part of your desired piece for the final cut.
- When planning an “L” shaped cut, mark and drill relief holes where the cut lines will intersect, always cut the shortest length first, and cut towards the relief hole.

See page 58 for cutting diagram

- When manipulating large porcelain panels, a variable speed right angle grinder is strongly suggested to reduce vibration. Electroplated diamond blades or electroplated diamond drill bits should be used for various cuts and manipulations.

See page 63-65 for recommended tool providers

IMPORTANT: Always cut towards the relief hole.

When cutting a “U” shaped piece, mark, and drill relief holes where the cut lines intersect. Always make the shortest cut first.

When cutting an “L” , drill relief holes where the cut lines intersect, always make the shortest cut first.

Color matched or tinted polyester, epoxy compounds or equivalent are often used to fill edges and bring the pieces together to form a smooth transition.

ALWAYS PROPERLY SUPPORT EACH PIECE PRIOR TO INSTALLATION.

- For circular cut outs, a circular electroplated diamond core bit must be used with a variable speed grinder or drill.

See page 63-65 for recommended tool providers

- For straight line cut outs, a variable speed grinder with electroplated diamond blades must be used. Relief holes or cuts before planning a square or rectangular shape are necessary.

- When possible, it is best to fabricate niches and holes after the panel is already installed with thin set on wall or floor. If it is not possible to cut holes or square/rectangular cuts (fireplace, sink, etc.) before the panel is installed, create full support with plywood or MDF panel template with same shapes and cuts to attach and transport the porcelain panel. Support panels should only be detached when porcelain panels are fully bonded to the substrate.

- It is also possible to move panels with proper moving tools made of multiple suction cups to avoid tension of the panel after it is cut.

- Material can be mitered using proper tools. Colored or tinted compounds such as polyester, epoxy, or equivalent are often used to fill edges and bring the 45 degree miter cuts together.

- Material can be bullnosed the same as regular porcelain.

- Large porcelain panels can be installed over concrete or other suitable substrates. You must honor all expansion joints or any defects in the substrate and mitigate prior to installation.
- Substrate should be a minimum of 1/4" over 10 feet in flatness.
- The back of the panel and substrate should be spread the same direction at the shortest distance with a modified LFT thin set mortar to achieve 100% coverage.

See page 63 for recommended trowels

Example of proper full mortar coverage

- Self-leveling systems are required to achieve desired flatness between joints. Fill any voids with the mortar for complete support.
- Recommended tools and techniques need to be used to ensure full bond of the panel. Recommended techniques should be followed to move air out from underneath the panels.
- The setting material manufacturers have vast experience in the installation of porcelain tiles and large porcelain panels. Accordingly, we strongly recommend that the installer should contact the relevant setting material manufacturers and seek their advice prior to installation of our large porcelain panels.
See referenced manufacturers page 63-65 for contact details.
- It is very important to spread thin set the same direction on both the substrate and the panel, the shortest direction of panels. Thin set brands we recommend are: LFT by Mapei, Prolite by Custom, 254 Platinum by Laticrete, and x77 Walls & x78 Floors by Ardex Tec. *See referenced manufacturers page 63-65 for contact details.*

- Place tile into the fresh mortar and firmly press to cause the ridges to flatten out and come together into a continuous void free bed. Install desired spacers/levelers of preferred grout joint design width.
- Polymer added sanded and unsanded grout, epoxy grout, silicone, or polyurethane can be used to fill the joints. If using
- epoxy grout, make sure to follow proper cleaning instruction within the manufacturers' specific time frame.
NOTE: Recommended 1/8" grout joint width should be maintained throughout the entire installation. Countertop seams can be butted.

Iris U.S./Maxfine does not accept any responsibility nor does it recommend a particular method of installation. It is the responsibility of the installer/buyer to design the tiling system based on the advice obtained from the setting material manufacturer.

- Large porcelain panels are ideal for exterior cladding of walls and vertical applications.
- We offer mechanical and bonded techniques.

Contact manufacturer for further information or to become a certified installer.

/ Countertop Fabrications

- Large porcelain panels are ideal for countertop installation with the proper substrate.

Contact manufacturer for further information or to become a certified installer.

FIRST CLEANING POST INSTALLATION

A PROPER INITIAL CLEANING AFTER INSTALLATION IS SUGGESTED.

PROFESSIONAL CLEANERS SHOULD BE USED TO MAKE SURE ALL CONSTRUCTION

RESIDUES ARE COMPLETELY REMOVED. *(See below for recommended professional cleaners.)*

CLEANING DURING INSTALLATION

Construction particles, dust, sand, and debris should be removed from the panel surface by sweeping with a soft brush.

Sand and other abrasive materials may scratch the floor, therefore the surfaces should always be kept free from dust, sand, and soil.

MAXFINE large porcelain panel surfaces should be properly covered and protected after the installation, and up to the completion of all construction.

ORDINARY MAINTENANCE

Large porcelain panels are a high quality, solid, nonporous product that

require minimum maintenance. *(For daily maintenance, see below for recommended household cleaners.)*

GET CERTIFIED NOW!

FACTORY ADVANCED CERTIFIED TRAINING

is implemented in our TN manufacturing facility by experts knowledgeable with MaxFine.

Participants learn how to handle, fabricate, and install our large porcelain panels for interior, exterior, floor, and wall applications. Upon completion and passing of our testing, they are then certified. Most importantly, participants obtain knowledge and hands on experience!

Please contact FACT@irisus.com for further information, or to participate in a training session.

MAXFINE

Quality Assurance Certificate

Congratulations on purchasing exquisite large porcelain panels, MaxFine by FMG.

These innovative large porcelain panels with state-of-the-art technology provide the aesthetics of a beautiful marble or stone, but contain the durability of porcelain.

For these reasons and your investment, we educate, train, and certify installers and fabricators throughout the nation at our Large Porcelain Panel Training Center in our manufacturing facility to properly handle, fabricate, and install these panels.

A factory certified installer is highly recommended for installation.
Please ask your retailer for a list of certified contractors.
